

Service Package Deployment

Efficient and seamless deployment

Efficient and seamless deployment

Prerequisites

- **Connectivity to VM or physical server with Network configured**
- **Additional storage available**
- **Discovery call to choose from the “available checklist items” to be delivered from within the package and determine the total number of days needed. Note: picking select combinations and all options for a package may increase the number of days beyond the estimates listed below**

Please keep in mind that by choosing all options of one of our packages the total effort could be more than our estimation in this datasheet.

★ Standard Enterprise Deployment (approx 4 hours)

Install and configure ownCloud for a quick and reliable production deployment. Provide the standard Linux stack with recommended configurations and assist the administrators in getting up to speed with the standard file sync and share features and functionality. Potential items to choose from include: Apache Web Server, MySQL/MariaDB, php, and SSL certificates. Also configuration review and best practices for basic administrative setup.

★ SILVER Enterprise Deployment Services (1-2 days)

The recommended services required for an Enterprise grade deployment includes all of the Standard Deployment Services options and the following multiple integration points such as LDAP, Windows Network Drive, and SharePoint. Recommendations and review of the General Architecture, caching modules and session management.

★ GOLD Enterprise Deployment Services (3-5 days)

Building on the Silver Enterprise Deployment Services, the Gold Package options include scale up and scale out recommendations, core resource evaluations and SSO integration.

**Recommended Package for non-Linux admins.*

★ Platinum Enterprise Deployment Services (5-10 days)

Custom engagements that include a comprehensive architecture review of complex multiple site configurations specifically focusing on HA and DR. This would include all of the Gold Package Services PLUS operation/functional testing to guarantee the system is setup for success and scaling. The ownCloud consultants are flexible in focusing on the areas that you choose, whether that be installation, configuration, integration or training.

**Recommended package for large scale complex deployments.*

DEPLOYMENT

	★ Silver	★ Gold	★ Platinum
Basic Installation			
Apache Web Server	✓	✓	✓
MySQL/MariaDB	✓	✓	✓
PHP	✓	✓	✓
SSL certificates	✓	✓	✓
Caching Module	✓	✓	✓
Session Management	✓	✓	✓
Load-Balancer configuration	✓	✓	✓
Evaluation basic hardware requirements		✓	✓
Functional tests	✓	✓	✓
Configuration - Logging - Anti-Virus-Setup - Cron-Jobs	✓	✓	✓
Extendet Configuration			
Review mounted Files Storage configuration		✓	✓
Setup Desktop Client		✓	✓
Oracle/Postgress SQL			✓
LDAP/AD			✓
SSO based on ADFS		✓	✓
Architectural Topics			
System-architecture review		✓	✓
Scale-out & Scale-Up		✓	✓
File Firewall			✓
External storage configuration			✓
Architecture review for HA and DR			✓
Installation hardening		✓	✓

Take your investment further with ownCloud Service Packages

ownCloud is designed for easy implementation in most IT environments. To make it even easier, ownCloud offers a series of Service Packages with targeted service options, so you can get exactly the help you need. Let us do the work. Choose the ownCloud Service Package that meets your needs, and take your investment further, faster.
